Описание на высокотемпературные системы близости. Модель 3300

BENTLY
Nevada

3300 High Temperature Proximity System

Bently Nevada™ Asset Condition Monitoring

Description

Gas and steam turbines can produce temperatures hot enough to damage or destroy conventional proximity probes. The 3300 High Temperature Proximity System (HTPS) is designed to withstand the extreme temperatures found inside gas turbines, steam turbines and other types of rotating machinery. The HTPS measures vibration, thrust position, differential expansion and other parameters inside the hot areas of these machines. High temperature installations include:

- Near a labyrinth seal in steam turbines
- Differential expansion in steam turbines
- When probe cables are routed through struts that support the bearing housing of a gas turbine
- When probe cables are routed out through the exhaust path of a gas turbine
- Monitoring a troublesome bearing in a high temperature area
- Mode shape analysis at the mid-span location on steam and gas turbines for online machinery diagnostics
- Interstage radial and axial seal clearance measurements at the mid-span location of multi-stage steam turbines to minimize seal rubs
- Most hot bearing locations that can destroy conventional proximity probes

High temperature transducer with a rugged design

The 3300 High Temperature Proximity System can be used for proximity measurements at hot locations with excellent results. Customer benefits include:

- Proximity probe with integral hardline cable rated for +350°C (+662°F) continuous service in extreme conditions
- 4 mm (160 mils) of linear range for most measurements in the hot sections of the machine
- Hermetically-sealed ceramic probe tip seals out moisture and contaminants for added durability
- Ceramic tip and stainless steel construction resists heat, moisture and corrosion
- Threaded and smooth case styles for various types of probe mounting
- Hardline cable available in lengths of 1, 2 and 5 metres for routing cable through hot sections of the machine
- 3.94 V/mm (100 mV/mil) signal output compatible with virtually all new and existing Bently Nevada monitors and diagnostic equipment

Mode shape analysis

The 3300 High Temperature Proximity System is used to protect and manage critical machines in your facility for increased safety and efficiency. It is also used for mode shape analysis when measurements are taken at the turbine mid-span location. Mode shape analysis is important for research and development of a new steam or gas turbine design or when troubleshooting an existing design. Mode identification probes provide lateral mode shape information which is extremely valuable for balancing rotating machinery and identifying faults such as shaft cracks, bearing failures, rotor-to-stator rubs and other machine problems.

For test and measurement applications, the HTPS will meet or exceed most requirements for making proximity measurements in high temperature environments. It is a viable option for your most challenging test problems.

The Bently Nevada 3300 High Temperature Proximity System is an advanced transducer designed for making proximity measurements at hot bearing locations in your machine. This transducer delivers dependable service in severe environments and is an ideal solution when using proximity probes at elevated temperatures.

Because of its thick hardline cable, the HTPS probe can be difficult to gap using a traditional threaded probe and bracket. Therefore, we recommend using smooth case probes, particularly if ordering a longer (2-metre or 5-metre) probe. The smooth case probes come with a clamp style mounting bracket to allow the probe to be gapped without turning.

Specifications

Unless otherwise noted, the following specifications are for a 3300 16 mm HTPS Proximitor® Sensor, matched extension cable and probe at 22 +4.4°C (72 +8°F), with a -24 Vdc power supply, a 10 kΩ load, a Bently Nevada supplied AISI 4140 steel target that is 31 mm (1.2 in) diameter or larger, and a probe gap of 2.5 mm (100 mils). The system accuracy and interchangeability specifications do not apply when using a transducer system calibrated to any target other than a Bently Nevada AISI 4140 steel target.

Electrical

Proximitor Sensor Input

Accepts one noncontacting 3300 HTPS 16 mm Proximity Probe with matched Extension Cable.

Power

Requires -19.6 Vdc to -26 Vdc at 12 mA maximum consumption. Operation at a more positive voltage than -23.5 Vdc can result in reduced linear range.

Supply Sensitivity

Less than 13 mV change in output voltage per volt change in input voltage.

Output resistance

50 Ω

Probe dc resistance:

Probe Length (m)	Resistance from the Center Conductor to the Outer Conductor (R _{PROBE}) (ohms)
1.0	5.06
2.0	5.82
5.0	8.11

Extension cable dc resistance:

Length of Extension Cable (m)	Resistance from Center Conductor to Center Conductor (R _{CORE}) (ohms)	Resistance from Coaxial Conductor to Coaxial Conductor (R _{JACKET}) (ohms)
4.0	0.88	0.26
7.0	1.62	0.49
8.0	1.84	0.55

Extension cable capacitance:

69.9 pF/m (21.3 pF/ft) typical

Field wiring:

Maximum length of 305 metres (1,000 feet) between the 3300 HTPS Proximitor Sensor and the monitor. See the frequency response graph for signal rolloff at high frequencies when using longer field wiring lengths.

Linear Range:

4.0 mm (160 mils). Linear range begins at approximately 0.5 mm (20 mils) from target and is from 0.5 to 4.5 mm (20 to 180 mils) (approximately -2 to -18 Vdc).

Recommended Gap Setting:

2.5 mm (100 mils)

Incremental Scale Factor (ISF)

3.94 V/mm (100 mV/mil) ±9.65% including interchangeability error when measured in increments of 0.5 mm (20 mils) over the 4.0 mm (160 mil) linear range.

Deviation from best fit straight line (DSL)

Less than ±78 μm (±3.1 mils).

System performance over extended temperatures:

Over a probe temperature range of 22°C to +350°C (72°F to +662°F) the ISF remains within ±30% of 3.94 V/mm (100 mV/mil), the DSL remains within ±0.51 mm (±20 mils).

Frequency Response:

0 to 6 kHz: +0, -3 dB typical, with up to 305 metres (1000 feet) of field wiring.

Recommended Minimum Target Size:

30.5 mm (1.2 in) diameter (flat target)

Recommended Minimum Shaft Diameter

152 mm (6.0 in)

Note: Measurements on shaft diameters smaller than 76 mm (3.0 in) usually require close spacing of radial vibration or axial position transducers with the potential for their electromagnetic emitted fields to interact with one another (cross talk), resulting in erroneous readings. Care should be taken to maintain minimum separation of transducer tips, generally at least 64 mm (2.5 in) for dual axial position measurements or 54 mm (2.1 in) for radial vibration measurements to prevent cross talk. Radial vibration or position measurements on shaft diameters smaller than 152 mm (6.0 in) will generally result in a change in scale factor due to the curvature of the shaft surface. Consult Performance Specification 159132 for additional information.

Effects of 60 Hz Magnetic Fields Up to 300 Gauss:

Output voltage in mil pp/gauss:

Gap	Proximator Sensor	Probe	Ext. Cable
0.5 mm (20 mil)	0.0020	0.0030	0.0011
2.5 mm (100 mil)	0.0042	0.0034	0.0046
4.5 mm (180 mil)	0.0096	0.0070	0.0157

Electrical Classification:

Complies with the European CE mark.

Hazardous Area Approvals

Not available.

Mechanical

Probe Tip Material:

Ceramic

Probe Case Material:

AISI 316L stainless steel (SST).

Probe Cable:

1, 2 or 5 metre length of AISI 304L SST hardline cable.

Extension Cable Material:

75 Q triaxial, fluoroethylene propylene (FEP) insulated.

Proximator Sensor Material:

Aluminum with epoxy powder coat finish.

System Length:

9 metres including extension cable

**Extension Cable
Armor
(optional):**

Flexible AISI 302 SST with FEP
outer jacket.

*Armored
Extension
cable:*

140 g/m (1.5 oz/ft)

**Tensile Strength
(maximum
rated):**

289 N (65 pounds) probe to
extension cable.

*Proximito
Sensor:*

255 g (9 oz)

**Connector
material:**

Stainless steel

**Probe case
torque
(maximum
rated):**

81 N.m (720 in.lb)

**Connector-to-
connector
torque**

*Recommended
torque:*

Finger tight + 1/8 turn

*Maximum
torque:*

0.565 N.m (5 in.lb)

**Minimum Bend
Radius (with or
without sst
armor):**

25.4 mm (1.0 in)

**System Weight
(typical):**

Probe:

117 g/m (1.26 oz/ft) of hardline
cable + 12 g/cm (1.07 oz/in) of
case

*Extension
Cable:*

45 g/m (0.5 oz/ft)

Environmental Limit:

**Probe
Temperature
Range**

**Operating and
Storage
Temperature:**

-34°C to +350°C (-30°F to +662°F)

**Extension Cable
Temperature
Range**

**Operating and
Storage
Temperature:**

-5°C to +177°C (-60°F to +351 °F)

**Proximito
Sensor
Temperature
Range**

**Operating
Temperature:**

-5°C to +100°C (-60°F to +212°F)

**Storage
Temperature:**

-5°C to +105°C (-60°F to +221 °F)

**Probe Relative
Humidity:**

100% condensing, submersible
when connectors are protected.

**Extension Cable
and Proximito
Sensor Relative
Humidity:**

100% condensing, non-
submerged when connectors are
protected.

Probe Pressure:

3300 high temperature probes are designed to seal differential pressure between the probe tip and case. Probes are not pressure tested prior to shipment. Contact our custom design department if you require a test of the pressure seal for your application

Note: It is the responsibility of the customer or user to ensure that all liquids and gases are contained and safely controlled should leakage occur from a proximity probe. In addition, solutions with high or low pH values may erode the tip assembly of the probe causing media leakage into surrounding areas. Bently Nevada Corporation will not be held responsible for any damages resulting from leaking 3300 high temperature proximity probes. In addition, 3300 high temperature proximity probes will not be replaced under the service plan due to probe leakage.

Ordering Information

3300 High Temperature Probe, 3/4-16 UNF threads:

330301-AXXX-BXXX-CXX-DXX-EXX-FXX

A: Unthreaded Length Option:

Note: Unthreaded length must be at least 1.1 inch less than the case length.

Order in increments of 0.1 in
Length configurations:
Maximum unthreaded length:
5.4 in
Minimum unthreaded length:
0.0 in
Example: 0 1 2 = 1.2 in

B: Overall Case Length Option:

Order in increments of 0.1 in
Threaded length configurations:
Maximum case length: 6.5 in
Minimum case length: 1.1 in
Example: 0 6 0 = 6.0 in

C: Hardline Length Option:

1 0 1.0 metre (3.3 feet)
2 0 2.0 metres (6.6 feet)
5 0 5.0 metres (16.4 feet)

D: Total Length Option:

Note: Extension cable is included with the proximity probe.
9 0 9.0 metres (30 feet)

E: Extension Cable Armor Option:

0 0 Without stainless steel armor
0 1 With stainless steel armor

F: Agency Approval Option:

0 0 Not required

3300 High Temperature Probe, M18 x 1.5 threads:

330302-AXXX-BXXX-CXX-DXX-EXX-FXX

A: Unthreaded Length Option:

Note: Unthreaded length must be at least 30 mm less than the case length.
Order in increments of 10 mm
Length configurations:
Maximum unthreaded length:
130mm
Minimum unthreaded length:
0.0 mm
Example: 0 5 0 = 50 mm

B: Overall Case Length Option:

Order in increments of 10 mm
Threaded length configurations:
Maximum case length: 160 mm
Minimum case length: 30 mm
Example: 1 3 0 = 130 mm

C: Hardline Length Option:

1 0 1.0 metre (3.3 feet)
2 0 2.0 metres (6.6 feet)
5 0 5.0 metres (16.4 feet)

D: Total Length Option:

Note: Extension cable is included with the proximity probe.
9 0 9.0 metres (30 feet)

- E: Extension Cable Armor Option:
00 Without stainless steel armor
01 With stainless steel armor
- F: Agency Approval Option:
00 Not required

3300 High Temperature Probe, Smooth Case:
330303-AXXX- BXX-CXX-DXX-EXX

- A: Overall Case Length Option:
 Note: Mounting bracket is included with the proximity probe.
 Order in increments of 0.1 in (2.54 mm)
 Threaded length configurations:
Maximum case length: 9.9 in (251.5 mm)
Minimum case length: 0.6 in (15.2 mm)
Example: 0 6 0 = 6.0 in (152.4 mm)
- B: Hardline Length Option:
10 1.0 metre (3.3 feet)
20 2.0 metres (6.6 feet)
50 5.0 metres (16.4 feet)
- C: Total Length Option:
 Note: Extension cable is included with the proximity probe.
90 9.0 metres (30 feet)
- D: Extension Cable Armor Option:
00 Without stainless steel armor
01 With stainless steel armor
- E: Agency Approval Option:
00 Not required

3300 High Temperature Proximito Sensor
330300-AXX-BXX

- A: Total Length Option:
 Note: Extension cable is included with the proximity probe.
90 9.0 metres (29.5 feet)
- B: Agency Approval Option:
00 Not required

Accessories
134867-01

Manual

159132

Performance Specification

134835-01

Mounting bracket for 330303 smooth case probe (spare).

Spare Extension Cable

330330-AXXX-BXX-CXX

- A: Cable Length Option:
 Note: Extension cable is already included with the proximity probe. This is a matched spare cable only.
040 4.0 metres (13.1 feet)
070 7.0 metres (23.0 feet)
080 8.0 metres (26.3 feet)
- B: Armor Option:
00 Without stainless steel armor
01 With stainless steel armor
- C: Agency Approval Option:
00 Not required

Table 1. Armor Length

Cable Length Option	Armor Length ±0.05 m (0.17 ft)
040	1.9 metres (6.25 ft)
070	5.6 metres (18.4 ft)
080	6.6 metres (21.7 ft)

Field Wiring Cable

132501-AXX

1.0 mm² (18 AWG), 3 conductor twisted, shielded cable for connections between Proximito sensor and monitor. Terminal ring lugs are installed at each end, including an extra shield ring lug at the monitor end.

- A: Cable Length Option in Feet:
 Order in increments of 1.0 foot (0.3 metres).
Minimum length: 2 feet (0.6 metres)
Maximum length: 99 feet (30 metres)
Example: 15 = 15 feet (4.6 metres)
